HYDRUSTENT
NON-DEGRADABLE IS SO 20TH CENTURY®

Innovative Medical Devices

We are specialists in biodegradable medical devices design and prototype development (ISO 13485)

Services and Technologies

We provide technical and consulting services in all phases of medical products development

Optimized Procedures and Reduced Costs

We are committed to reduce healthcare systems expenses and decrease environmental impact

COMPANY PROFILE

HydrUStent SA is a certified company for research, design and development of medical devices (ISO9001, ISO13485, NP4457). We are specialized in developing biodegradable medical devices for urology and gastroenterology. Our mission is to help healthcare systems reduce treatment costs and environmental impact.

PRODUCTS

HydrUStent has developed and patented several technologies in the urology and gastroenterology field. One of our products is a biodegradable polymeric ureteral stent that reduces treatment costs in 60% and avoids the needs of a second surgery.

We offer medical device engineering services that go from early concept to preclinical pilot batches (in-house Clean Room ISO 7). We will evaluate your idea and its clinical need (together with key opinion leaders) and we will take care of prototyping, in vitro testing, animal testing, clinical testing and scale-up manufacturing.

We have also developed a patented technology for compound impregnation in medical tubing (post-manufacturing process).

TRADEMARK

HydrUStent

EXPORT MARKETS

France, Germany, Belgium, Netherlands, China, Unites States of America, United Arab Emirates.
